Brand Architecture

NoBull Marketing is the parent brand. The Law Firm Revenue Engine™ is its flagship system — a controlled extension of the established brand, not a replacement of it.

Every surface stays approximately 70–75% NoBull: eggshell backgrounds, crimson and earth typography, the classic bull. The Revenue Engine's black-and-gold world is concentrated into the remaining 25–30%.

Confine the flagship layer to one deliberate dark system band, a contained area behind or beside the book in a hero, and small controlled references near the closing call to action.

A typical surface: light NoBull sections, one contained dark band, crimson footer. The dark layer never exceeds roughly 30% of the page.

Logo

The main version of the NoBull logo is shown below in the primary colors. This logo should be used whenever possible.

Always use the exact supplied artwork. Never redraw, recolor, crop, distort, rearrange, or regenerate it.

Logo Mark (Icon)

The mark used as a stand-alone element is shown below. The mark may be used in various marketing materials to reinforce the brand.

The mark is supplied in crimson for light surfaces and in reverse white for crimson or dark surfaces.

Logo (reverse)

Reverse version of the logo. Use this logo on top of colors or images, at the designer's discretion. Solid background colors should only include brand colors included in the style guide or black/grayscale.

On Revenue Engine surfaces, the reverse logo sits on Engine Black or Charcoal.

Logo (black)

The black version of the logo is available when color printing is not an option. The logo mark version is available in both white and black.

Black artwork lives in the original master asset library (EPS/AI); the version shown here is reproduced from it.

Size & Scale

The logo may be enlarged to any size, but should not be reduced below a height of 0.2" to retain legibility.

Positioning

The logo should have a minimum clearance of space between all other elements, as shown below.

Incorrect Logo Usage

The following examples illustrate non-approved applications of the logo. These changes damage the integrity of the logo and brand.

Distorted

Color alterations

Using reverse (white version on a non-approved color)

Full color on similar color background

Gold-recolored or generic bull marks

Full-page black & gold outside the system band

Merged-era additions: the bull is never gold, the lockup is never rebuilt in the book's typography, and no surface outside the one dark system band goes full black-and-gold.

Design Themes: Pinstripes

The use of subtle pinstripes within the branding collateral and website will elevate the look and give NoBull a more distinguished appearance.

This is a light and modern approach to the traditional pinstripe accent. This plays nicely with supporting graphics and can be used to add visual interest and breakup areas of solid color.

Design Themes: Outlines

Outlines are a dignified way of conveying elegance, competence and class.

Use outlined shapes along with other polygonal figures to enhance photography and add visual interest.

Make sure the outlines are thin, here they are set at 1px. Thick lines will convey a different message to your user, avoid using them in NoBull Marketing collateral.

Design Themes: Data Visualization & Illustration

With NoBull Marketing relying on data sets to show value in its services, having visual aids to help users quickly digest said data is an important factor in NoBull's Brand.

When applicable, utilize vector graphics to further sell the product.

Charts stay abstract until the numbers are verified — never publish fabricated metrics.

Design Themes: Engine Machinery

The Revenue Engine's visual world is machinery: engineered components, schematic lines, subtle sparks and dimensional lighting, rendered in deep true black and warm metallic gold.

Use only the approved machinery artwork supplied with this guide. Never substitute generic gears, blueprints, or stock industrial photography.

Machinery lives inside the flagship layer — the contained area beside the book in a hero, or one deliberate full-width dark system band. It never repeats behind multiple sections, and the dark layer never exceeds roughly 30% of a page.

Primary Colors

The primary colors are shown below in CMYK, RGB, HEX, and Pantone® color codes.

Crimson

CMYK 29 / 92 / 78 / 29
RGB 138 / 41 / 47
HEX #8a292f
Pantone® 56-15c

Earth

CMYK 57 / 55 / 72 / 42
RGB 82 / 75 / 58
HEX #524b3a
Pantone® 13-16c

Eggshell (BG)

CMYK 06 / 06 / 12 / 00
RGB 238 / 232 / 220
HEX #eee8dc
Pantone® 3-9c

Liberty Blue

CMYK 83 / 74 / 12 / 01
RGB 72 / 86 / 150
HEX #485696
Pantone® 103-6c

Goldenrod

CMYK 17 / 31 / 75 / 01
RGB 213 / 172 / 92
HEX #d5ac5c
Pantone® 11-5c

Goldenrod is an accent — labels, rules, icons, small emphasis — never a section background. For gold text on light surfaces, use Gold Ink from the extended palette overleaf.

Extended Palette: Revenue Engine

The flagship layer adds a controlled dark range, shown in CMYK, RGB, and HEX. No Pantone® equivalents are assigned to the extension — CMYK values are process conversions from RGB.

Engine Black

CMYK 00 / 00 / 17 / 98
RGB 6 / 6 / 5
HEX #060605

The Revenue Engine system band and cinematic dark surfaces.

Charcoal

CMYK 00 / 00 / 12 / 93
RGB 17 / 17 / 15
HEX #11110f

Machinery shadow tones and dark gradients within the band.

Ink

CMYK 00 / 19 / 31 / 94
RGB 16 / 13 / 11
HEX #100d0b

Near-black text on light surfaces.

Warm Paper

CMYK 00 / 01 / 02 / 02
RGB 250 / 248 / 244
HEX #faf8f4

Warm light cards and alternate light backgrounds.

Cream Deep

CMYK 00 / 03 / 11 / 09
RGB 231 / 223 / 206
HEX #e7dfce

Darker beige bands on light pages.

Gold Ink

CMYK 00 / 26 / 78 / 51
RGB 125 / 92 / 27
HEX #7d5c1b

Accessibility-grade gold for text on light surfaces; bright Goldenrod stays for dark bands, rules and fills.

Primary Typeface

The typeface used for the NoBull logo and throughout all marketing materials is Crimson Pro. The font is an open-source Google typeface available in a variety of different weights.

In the merged system, display headings on light surfaces are set in Regular (400) in Earth. Gold serif type is reserved for small labels, rules, and headings inside dark Revenue Engine bands.

Secondary Typeface

The secondary typeface used for the NoBull website and throughout all marketing materials is Sweet Sans Pro, licensed through Adobe Fonts and served as hosted kit **hveorhv** — no font files are distributed.

NON-STANDARD WEIGHT MAP

In this kit, CSS **font-weight 600 is Regular** and 400 is Extra Light. Body text never drops below 600.

Extra Light	400
Light	500
Regular	600
Medium	700
Bold	800
Heavy	900

Extra Thin (200), Thin (300), and italics for every weight are also licensed in the kit. Arial substitutes only when the kit is unavailable.

The Book & System Language

The Law Firm Revenue Engine™ is presented physically as a book. Always use the exact supplied cover artwork — never regenerate, retype, recolor, or crop it. Three-dimensional presentations (perspective, page edges, spine, shadow) are constructed around the exact cover.

The torn-currency motif belongs to the cover alone. Never repeat it elsewhere.

The system is always named in this order: CaseGen™, then CaseIntake™, then CaseConvert™, then Signed Cases. The engine and its three systems carry the ™ mark; “Signed Cases” is the outcome, not a product name.

Within CaseGen™, the sub-systems keep their locked names: Local Authority Optimization™, Paid Search Control System™, and Review Velocity System™.

CaseGen™ → CaseIntake™ → CaseConvert™ → Signed Cases

File Types

A variety of file types are included for different applications. Refer to the instructions for when to use each file type.

The delivered asset pack

nobull-logo-full-color.svg — primary logo · light backgrounds

nobull-logo-reverse.svg — reverse logo · crimson or dark backgrounds

nobull-icon-crimson.svg — bull mark · light backgrounds

nobull-icon-reverse.svg — bull mark · dark backgrounds

law-firm-revenue-engine-cover.png — exact book cover

machinery-hero.png — approved machinery · hero

machinery-band.png — approved machinery · system band

machinery-bg.png — approved machinery · backdrop

Master EPS/AI files for the original logo suite, including the black version, remain in the NoBull asset library.

.svg – A vector file format that scales to any size without losing quality. All four logo files are supplied as SVG; use them for web, print, and any application where size varies.

.png – A raster format that supports transparent backgrounds. The book cover and the approved machinery artwork are delivered as PNG and are placed over other elements without modification.

.pdf – A universal file type that can be used for a variety of applications — including this guide. Printers may want a PDF included along with source artwork for reference.

Hosted fonts – Sweet Sans Pro is not distributed as files; it is served by Adobe Fonts kit hveOrhv. Crimson Pro is open-source and available from Google Fonts.
