Logo

The main version of the NoBull logo is shown below in the primary colors. This logo should be used whenever possible.

Logo Mark (Icon)

The mark used as a stand-alone element is shown below. The mark may be used in various marketing materials to reinforce the brand.

Logo (reverse)

Reverse version of the logo. Use this logo on top of colors or images, at the designer's discretion. Solid background colors should only include brand colors included in the style guide or black/grayscale.

Logo (black)

The black version of the logo is available when color printing is not an option. The logo mark version is available in both white and black.

Size & Scale

The logo may be enlarged to any size, but should not be reduced below a height of 0.2” to retain legibility.

Positioning

The logo should have a minimum clearance of space between all other elements, as shown below.

Incorrect Logo Usage

The following examples illustrate non-approved applications of the logo. These changes damage the integrity of the logo and brand.

Changing arrangement of elements

Distorted

Changing size/positioning of lockup

Color alterations

Using reverse (white version on a non-approved color)

Full color on similar color background

Design Themes: Pinstripes

The use of subtle pinstripes within the branding collateral and website will elevate the look and give NoBull a more distinguished appearance.

This is a light and modern approach to the traditional pinstripe accent. This plays nicely with supporting graphics and can be used to add visual interest and breakup areas of solid color.

Design Themes: Outlines

Outlines are a dignified way of conveying elegance, competence and class.

Use outlined shapes along with other polygonal figures to enhance photography and add visual interest.

Make sure the outlines are thin, here they are set at 1px. Thick lines will convey a different message to your user, avoid using them in NoBull Marketing Collateral.

Design Themes: Data Visualization & Illustration

With NoBull Marketing relying on data sets to show value in its services, having visual aids to help users quickly digest said data is an important factor in NoBull's Brand.

When applicable, utilize vector graphics to further sell the product.

Primary Colors

The primary colors are shown below in CMYK, RGB, HEX, and Pantone® color codes.

File Types

A variety of file types are included for different applications. Refer to the instructions for when to use each file type.

.eps – This is a vector file type and is fully scalable without losing quality. Printers will likely require an eps file for the highest quality print possible.

.jpg – The jpg file is a raster graphic of lower quality than the eps and is suitable for email attachments and various digital applications.

.png – This file has a transparent background and should be used for similar applications as the jpg, where the logo will be placed over another element.

.pdf – This is a universal file type that can be used for a variety of applications. Printers may want a PDF included along with the eps file for reference.

.svg – An SVG file is a graphics file that uses a two-dimensional vector graphic format created by the W3C. It describes images using a text format that is based on XML. SVG files are developed as a standard format for displaying vector graphics on the web.

.ai – The native source file used for creating the original artwork is Adobe Illustrator.
